

# The oldest turtle species is in danger

www:// animals 1. de

By Lara Lang

27. 4. 2021, Australia

Around <sup>land in the</sup> ~~at~~ the Australia, ocean live the oldest turtle species in the world. Scientist called them "The OBH - turtle". They are as big

as a human hand and they have a wonderful blue ~~shell~~ <sup>shell</sup>.

These wonderful animals are in danger, because of

the plastic and the ~~oil~~ <sup>in the ocean,</sup> they can't find anything

to eat. Normally they <sup>eat</sup> ~~eat~~ plankton but now

the scientist <sup>have to</sup> ~~give~~ <sup>give</sup> them to eat "fake-plankton"

that's made of eggs and salad. For <sup>the</sup> ~~long~~ <sup>long</sup> runs,

they can't eat that because their bodies are

"general" to eat plankton <sup>at</sup> ~~the~~ <sup>12. Million years.</sup> ~~generation~~  
Scientists said that this was a special species  
of turtles that need to be protected.

A land owner said that it would be tragic if the  
OBH-turtles go extinct because the islands <sup>go</sup> ~~extinct~~  
were famous for their turtles, so ~~no~~ more tourists  
will come and the island will not had enough money.

1.5.2021  
Austria

This is Jerry this mouse has a very special talent.\* Jerry looks like a normal mouse but he can learn very fast what other mouse not can. Jerry is 3-months-old and she is a girl. She is very interesting and you can play with her.

The mouse can learn Tricks in a few minutes and the scientists said that Jerry can't forget them. The scientists try

that Jerry become babies and maybe the kids are more intelligent than Jerry.

# Special Mouse can speak with humans!

Alysa  
6.5.2021

[www.magazine/punk.at](http://www.magazine/punk.at)

By Kate Love, 4.5.2021, Graz

Scientists from Austria found out that mice are very clever animals. They can find Alcohol or Drugs, and now the scientists <sup>reported that they</sup> found a very special

Mouse, this mouse is unlike any other, it has an amazing - talent.

It can speak with humans!

This mouse can speak with every single human! How does this, ~~this~~

work? The scientists found out that the mouse have the same voice

frequency like humans. So if the mouse comes near your ear you may

can understand it, but only if it make some noises.

This mouse can do something that no other mouse can, and this special

power gave the mouse much prizes. The scientists hope that this animal

live long and become babies.

David Echoars

Gras 6.5.2021.

The one year old mouse (names Flo) is very interesting for scientists

because he look like a normal mouse but he is a special mouse.

He can jump from the floor to a window that's a normal

think what other mouses can do but flo can it better he can jump

1.60 meters in the height so he can jump very well. ~~But that~~

~~one of the two think what he can. The other is that he are very~~

~~leaver. He can do.~~ Scientists say to the mouse "This mouse is unlike

any other. On the world flo is the one mouse he can jump

so good." The scientist (names Tom) <sup>take</sup> flo two <sup>hate</sup> Mith in his house and

he says that he give flo normal rat food and not other food. So a

expert say: "That's not true. When he become round rat food than  
he can't jump so good but it can work. So when the training  
very good then it go.

This special turtles needs to be protected!

by Gustaf Gutin

Turteliland 23.9.19

Brand new informations to the baby turtles species.

Experts and Scientists find out that baby turtles species is in danger because they had a new food in Nature that's not good for them. When the turtles eat it, they died <sup>the next</sup> in 24 hours.

Experts said that ~~this~~ is a special species of turtles that's needs

to be protected. The turteliland were they live is famous

for the little sweet turtles put in three weeks the turteliland

must close because the most turtles died.

Experts ~~say~~ said to that the islands are famous for their

turtles. And the most said that they can't close the islands.

Scientists will make food for them but they don't have so many

time. So the Scientists must work harder when they will that the

turtles baby species will survive. Some People said that the

Scientists will kill the turtles but that's not true.

~~Another~~ On the other Scientists will let the turtles free but

the sharks ~~and~~ and other dangerous animals will kill all of

the turtles. And the turtles also don't know how to become

food ~~because~~ because we had feed them. That means they

can't survived in the Wildness, and must be live ~~on~~ on the

turtle islands. And we can't let them free. 195 words

## Diamond Turtles

Beff Jezos : On the 21st of march, a new species of turtles was discovered on an island named Gem that scientists have bought and named because of its special turtles that have a <sup>shiny blue</sup> ~~diamond-like~~ shell. Currently there are 15 diamond turtles on the island and they are the only ones existing on the planet.

Experts have said that the island is soon going to be famous because of its turtles.

They ~~Experts~~ are also claiming that this special species needs to be protected to

survive for about 5 years, by then they will have many more of them and they will be sold.

currently these turtles are worth about 300 thousand dollars because of the material that their shell is made of which is not a diamond but an entire new material that can't be created with anything else. Luckily you can't travel to the island and take a turtle with you because the exact location is still unknown and the turtles will be kept and raised on the island until their ~~children~~ babies are about 3 months old.

This Turtles are famous

WWW.Turtles\_famous.com

Luana Pisst, 6.5.2021, Afrika

This Baby Turtles are famous, because this is a special species of turtles. All of this little turtles are blue but you can't see it with eyes you must look at this Babys with an microscope. Experts said that the islands were famous for their turtles. The turtles have their own places in Afrika and you can't ~~found~~ <sup>find</sup> this Babys often. Another Expert said that this ~~is~~ <sup>was</sup> a special species of turtles that needs to be protected.

Experts gave the turtles into a cage and locked at their, but two weeks later all of this little Babys died. This amazing turtles are famous and you can visit the Museum in New York, because you can find the turtles skeleton there.

## The Blue shiny Turtles

Lucas Roll Sanchez

on the 18.04.2021 Experts and Scientists found in Tabarka a

[www.blueshine.com](http://www.blueshine.com)

rare species of Turtles that are blue and can shine in the night.

west side of Fa

In the little island named Tabarka lives a special ~~pec~~ species of Turtles that is very rare. <sup>huge</sup> because Tabarka is famous for their Turtles. Scientist said that they are in danger, because in Tabarka there are a lot of animals that eat the Turtles but of this species 'are not a lot' in Tabarka.

The Turtles are not very big they are as big as a Tennisball and are very easy to see because of their blue shiny skin parts.

The only point because we just found them now is because they hid in a very ~~to~~ deep underground cave.

Scientists call the species now Blutels.
