

Around The World

And More!

**Leon
Robert
Ahmad**

Dear readers,

The magazine "Around the world" was written for you by Ahmad, Leon and Robert. In our magazine the focus was on psychology and general knowledge. We have tried to make it all so interesting that none of you want to stop reading. But everything has an end as well as our introduction to the best magazine you will ever read.

Samsung C&T Engineering & Construction Group

what you most likely didn't know.

Most of you know Samsung as a technology company, but did you know they can do much more? Since 1938 the company has been building the largest, most creative and beautiful buildings in the world.

The most beautiful sights like Burj Khalifa, Palm Islands, Empire State, Incheon Int'l Airport etc. were built with Samsung C&T.

History:

Samsung was founded as a grocery store by Lee Byung-Chull in 1938. He later founded

Samsung Electronics, Samsung electromechanics, Samsung Corning and Samsung semiconductors & telecommunications.

Samsung even built their own cars. But a few years later they sold their car industry to Renault.

They entered the construction industry and built three of the tallest buildings in the world. **Petronas Towers, 101 Taipei Tower and Burj Khalifa.** That means, that Samsung doesn't just build large smartphones or televisions. The 21.380m long

Incheon Grand Bridge was also built by Samsung. They have also built 4 very big Medical Centers and Hospitals in Asia. Samsung C&T even built several nuclear power plants.

As they are in the smartphone market, they are in the construction industry. Quantity comes first.

Ahmad. I

What and how important is time?

What you unconsciously throw away today, you will wish for later. Every second is as important as every breath you take. If you learn to deal cleverly with the daily 86400 seconds, you can achieve everything that you set yourself as a goal. A day also lasts 24 hours for the rich, only the time that they use meaningfully in these 24 hours is longer.

Why should you watch them use their time wisely while you most likely have more time but don't know how to use your time properly? "More is better than less" so why should we not do anything because we are afraid to do too much?

The time for happiness today is not tomorrow.

You should never try to ignore those who give you their time and always take time for you. This person knows how important time is and gives you one of the most important things they have. Every minute of ignorance is very bad for the person who never ignores you. What you can do now should never be postponed until later. The world is small, time is short and destiny is unpredictable. You never know when your last breath or your last minute will be in life.

Stress often arises from large inquiries in a short time. Little time / too many tasks cause stress. Depression, burn-outs, panic attacks, palpitations, insomnia, irritability, restlessness, anger, difficulty concentrating etc. are in most cases due to stress. Most of the time, stress comes from school. Not everyone with a good plan does well. Stress isn't just psychological.

Go out, do lots of sports, meditate, take a break to relieve stress. But a break means "to be free from everything." No social media that unconsciously causes a lot of stress.

The hottest and coldest places on earth

You may think 30° is a lot and -10 is very cold. But here are some of the places with the extreme temperatures on our planet.

The hottest places on earth:

The first one is the Death Valley in the USA. The average temperature there in the summer is 26° and the highest temperature that is measured there was 57°. You can see it is very hot there and you cannot sit around in the sun. The next place is Dallol in Ethiopia and the average temperature there is 34° and the and to live there is very hard because there is not a lot of water and it is very dry. But the people who live there are surviving there for years and they live a very happy live. And the last place is Bangkok. You might know it because it is a very big city in Thailand. The average temperature there is 34° and the humidity there is 90% so is even harder to live with the temperatures there.

The coldest places on earth:

Now we will speak about the coldest places on our planet. The first one is in Russia. It is the city Oymyakon and the average temperature there is -13° and the lowest temperature measured there was -71° and this holds the world record still today. The second places is Eureka in Canada. The average

temperature in summer there is -20° and in Winter is -40°. So, these where the extreme temperatures on our planet. These places are not for everyone because an only few people can handle to survive these temperatures.

Robert Spasov

Landed on Mars.

After several attempts by NASA to land on Mars, they succeed on February 18, 2021. But what was sent up? It's a small rover, it resembles a controlled toy car. The rover is equipped with gauges and tools. After landing they were able to receive the first picture of Mars, but they were still in black and white.

On April 4, 2021, however, another device was sent to Mars. This is a MARS HELICOPTER INGENUITY. Ingenuity is the first helicopter to make flights in the atmosphere of another planet. Because now the landscape can be examined very carefully.

On April 4, 2021 (Easter Sunday) the Rover Perseverance dropped the helicopter. It is expected to take off for the first time on April 11th. The start of the expedition day is still unknown, but many assume that it will be in 2022.

Conspiracy people don't just think that NASA is after Mars researching for science, no, they think NASA is after gold.

Apparently, there are tons of gold on the planet. If that were really the case, and many people assume it, Mars could soon turn a planet into a mine.

UFO sightings

UFO sightings appear to be more common in recent times. Many think that it is fake or that there is a logical explanation. But there are also people who believe that. In this text I would like to write many mysterious and exciting UFO sightings.

Tehran incident:

18. September 1976

Teheran, Provinz Teheran, Iran

On the night of September 18, 1976, several calls came into the tower of Mehrabad Airport in Tehran. Residents of Tehran report an unusual light over the city. Ah man describes a bright, white light with a red light in the middle. At 00:30 a Phantom F-4 interceptor launched for reconnaissance. The pilot and the navigator of this jet can see the object. When the interceptor approached the object, the jet's on-board electronics and communication fail.

Official UFO Night of Brazil:

19. March 1986

Rio de Janeiro / São Paulo, Brasilien

At around 9:20 pm, the Brazilian Air Force received reports of unidentified aircraft movements near the city of São José dos Campos. The message comes from the control tower at the city's airport. Several lights are described that change color between red, yellow, green, and orange. At around 10:20 p.m., the first fighter jet was launched for reconnaissance. A total of five jets took off in the following two hours. Four days later, on May 23, 1986, the Brazilian Minister of Aviation, Octavio Moreira Lima, called a press conference on the incident with the responsible military personnel and the pilots of the military aircraft involved. Lima confirms the incident and reports: "Our jets were followed by these objects for several minutes. Hence the incident is known as the "Official UFO Night".

graphics cards

What is a graphics card: A graphics card is a PC component that controls the graphics output in a computer and is therefore one of the most important parts of a PC.

Graphics Cards Market:

Graphics cards are very hard to get today and when they are overpriced. The new graphics card () is currently very popular because it has a very good computing power and is well suited for Bitcoin farms. Currently it is so rare that you can sell it on eBay for 7000€ or more although it costs only 1000€.

Why: Because graphics cards nowadays have a much higher and better computing power than a processor, they are used for bitcoin farming. And the more graphics cards you have, the more performance and more Bitcoins.

What are Bitcoins:

- Bitcoin is the world's best-known cryptocurrency, i.e. a digital and decentralized currency.
- It works without a regulator via a so-called blockchain: a kind of list containing entries for each transaction.
- Bitcoin is an open-source software project. This means that users can view and use the source code and thus the way the system works.

A solution to the graphics card problem: Nvidia (a very well-known electronics and technology company) is developing a new graphics card only for Bitcoin farmers. The price of the graphics card is an astonishing price of 10,000€.

PS5 vs PS4

Maybe you already have a PS4 at home? Or a PS3, but can you tell the difference between the PS4 and PS5?

If you don't know PlayStation or PS is the most sell console of all time. The PS5 came out last year along the Xbox Series X. On the paper it's way more powerful than the older PS4 that came out 2013. But is it worth to buy it now? Not really because new games will come out for the PS4 too. And it's also really hard to get one right now because they are out of stock. But how is it on the technical side? The PS5 has a AMD 8-core, 16 thread, up to 3.5Ghz CPU and it has a very powerful 36 CUs at 2.23GHz, 10.3 TFLOPs GPU and 16 GB RAM. The PS4 has a 8 Jaguar Cores, 1.6GHz CPU and a 18 CUs at 800MHz, 1.84 TFLOPS GPU and 8 GB RAM. So you can see that the PS5 is 5 times faster than the PS4. And it also supports Raytracing on the level of a RTX 2080 TI. So the games can run on better Frame rates and better graphics. The best thing about the PS5 is that you can play every game that came out for the PS4 so you can your favourite games from the last generation.

Greifswald objects:

24. August 1990

Greifswalder Bodden, Deutschland

On the evening of August 24, 1990, over a hundred people saw bright balls of light over the Greifswalder Bodden. The first sightings were made around 8:15 p.m. and lasted until 9:00 p.m. The spheres were described as "glistening bright" with reddish-white light. The objects swayed slightly, otherwise remained motionless.

Small flashes of light can be seen from time to time. At least once one of the groups went out and then reappeared in another place about a minute later.

If you ask me, I find the incidents all very exciting. Whether the stories are all fake or true. The appearances did exist, but whether they were all made on purpose. Nobody knows exactly.

Leon Mayer

Spiders

Are you afraid of spiders? Maybe you are like many other people. If you have Arachnophobia the spiders could be your biggest enemy. But did you also know that there are only two high venomous spiders in the US? Now we will talk about them.

If you live in the US you maybe have seen this two spiders the Brown Recluse and the Black Widow. This are the two most dangerous Spiders in the US.

When you get bitten by one of these you have to call the ambulance as fast as possible because they have very venomous venom. There are a lot bigger spiders in the US like the Wolf Spider or the Banana spider, but they are not so venomous. These two spiders the Brown Recluse and the Black Widow are very common in the hot states like Arizona, California, Texas, New Mexico and the howl east coast. In the colder states like North Dekota, Illinois, Minessota, Alaska and Montana there are big but not very venomus spiders like the Wolf Spider.

But how is it in Europa? Europa is less more venomus than the Americas. In Europa there are not that vonumus spiders. There are only the comd footed spiders, widow spiders, Violin Spiders, Fiddleback Spiders and the recluse spiders. This spiders live all across Europa and no one of them is deadly. But the bites can hurt a bit and the place where you got bitten can swallow.

The philosophy and psychology of money

The addiction to money

Money in itself is nothing more than a medium with which goods can be traded. It's just a banknote or a coin. You give the money "value and meaning" and yet it plays an important role in society.

"Money doesn't make you happy", but without money you won't be happy either, as long as your happiness depends on one thing.

You can't buy happiness with money, but you can buy happy moments with it. It's not about what you have in the beginning, what matters is what you have left in the end.

The income divides you into social classes and your opinion is more likely to be heard if you have a high income. That's one reason why you often run after money. One unconsciously chases fame and attention.

An example of how important money is:

Football has been in England since 1846 and has always been played for passion and fun. But as many are saying right now: "Created by the poor, stolen by the rich."

12 football clubs want more money and are creating a new

competition. Each participant receives around 400 million EUROS annually and each winner wins a billion. The competition is called "European Super League" and the boss will be Florentino Pérez. 20 clubs should be allowed to play annually. But as I often say, everything has its downsides and so does the new competition. The 12 founding clubs, including FC Barcelona and Juventus, are no longer allowed to play in any other competition, have to pay fines and their players are no longer allowed to play in the national team, e.g., for the football world championship.

That means that we may never see Messi and Ronaldo again in a World Cup, Euro, Copa America, Laliga, Serie A or Champions League. That would be a huge loss for the competitions. Messi and Ronaldo attract most of the fans and are not only the reason for the success of the clubs and leagues in terms of football. If they retire it would be the biggest loss in football ever.

Ahmad. I
